

The Guv'nor

Every Guv'nor guitar player must have one of these Guv'nor overdrive pedals. So go along to your Guv'nor music shop, hand over a really Guv'nor price and get loads of Guv'nor features, plenty of Guv'nor reliability and a truly Guv'nor sound.

Treble control

Adjusts the amount of upper harmonics (top end) in the sound.

Bass control

Adjusts the low frequency 'bottom end' of the sound.

Level control

Adjusts the overall output level allowing the user to balance the level of distorted sound to the level of the straight signal.

Middle control

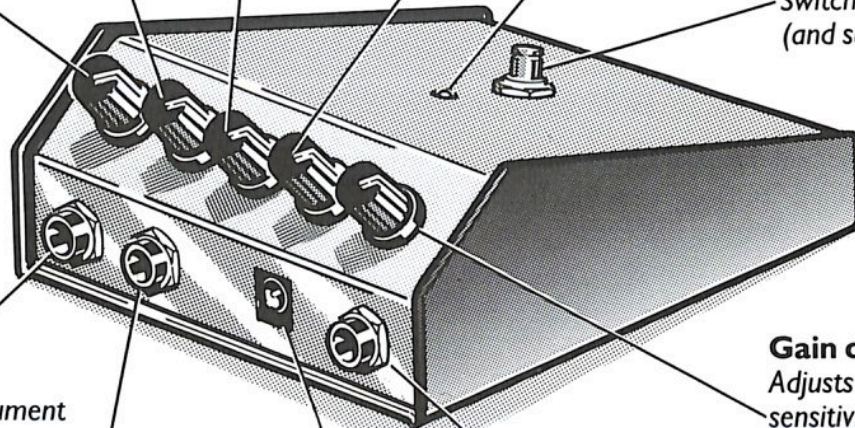

Adjusts the mid range frequencies. High settings boost the mid for fatter sounds. Low settings cut the mid to give 'hollow' sounds.

On/Off LED

Indicates when the pedal (and sub loop) is activated.

By-Pass Footswitch

Switches in the effect (and sub loop if in use).

Input Jack

Connects the instrument to the unit.

Send and Return Loop Jack

Allows the interconnection of further effects units from the switch on the Guv'nor.

DC Input socket

Connects a standard 9 volt external DC power supply (not supplied) to the unit to eliminate the need for a battery.

Gain control

Adjusts the overall input sensitivity. Lower settings give cleaner sounds. Higher settings for more overdrive.

Output Jack

Connects the pedal to the amplification system.
